#### **EXERCISE-16**

#### PROCEDURES AND FUNCTIONS

# **PROCEDURES**

#### **DEFINITION**

A procedure or function is a logically grouped set of SQL and PL/SQL statements that perform a specific task. They are essentially sub-programs. Procedures and functions are made up of,

- Declarative part
- Executable part
- Optional exception handling part

These procedures and functions do not show the errors.

#### KEYWORDS AND THEIR PURPOSES

**REPLACE:** Itrecreates the procedure if italready exists.

**PROCEDURE:** It is the name of the procedure to be created.

**ARGUMENT:** It is the name of the argument to the procedure. Paranthesis can be omitted if no arguments are present. **IN:** Specifies that a value for the argument must be specified when calling the procedure ie. used to pass values to a sub-program. This is the default parameter. **OUT:** Specifies that the procedure passes a value for this argument back to it's calling environment after execution ie. used to return values to a caller of the sub-program. **INOUT:** Specifies that a value for the argument must be specified when calling the procedure and that procedure passes a value for this argument back to it's calling environment after execution. **RETURN:** It is the datatype of the function's return value because every function must return a value, this clause is required.

#### PROCEDURES – SYNTAX

create or replace procedure procedure name> (argument {in,out,inout} datatype ) {is,as}

variable declaration; constant declaration; begin PL/SQL subprogram body; exception exception PL/SQL block; end;

# FUNCTIONS – SYNTAX

create or replace function <function name> (argument in datatype,.....) return datatype {is,as}

#### Sarvesh S - 240701479 - DBMS RECORD

variable declaration;

constant declaration;

begin

PL/SQL subprogram body;

exception

exception PL/SQL block;

end;

## CREATING THE TABLE 'ITITEMS' AND DISPLAYING THE CONTENTS

SQL> create table ititems(itemid number(3), actualprice number(5), ordid number(4), prodid number(4));

Table created.

SQL> insert into ititems values(101, 2000, 500, 201);

1 row created.

SQL> insert into ititems values(102, 3000, 1600, 202);

1 row created.

SQL> insert into ititems values(103, 4000, 600, 202);

1 row created.

SQL> select \* from ititems;

ITEMID ACTUALPRICE

		ORDID PRODID	
101	2000	500	201
102	3000	1600	202
103	4000	600	202

# PROGRAM FOR GENERAL PROCEDURE – SELECTED RECORD'S PRICE IS INCREMENTED BY 500, EXECUTING THE PROCEDURE CREATED AND DISPLAYING THE UPDATED TABLE

SQL> create procedure itsum(identity number, total number) is price number;

- 2 null price exception;
- 3 begin
- 4 select actualprice into price from ititems where itemid=identity;
- 5 if price is null then
- 6 raise null price;
- 7 else
- 8 update ititems set actualprice=actualprice+total where itemid=identity;
- 9 end if;
- 10 exception
- 11 when null price then
- 12 dbms output.put line('price is null');
- 13 end;
- 14 /

Procedure created.

SQL > exec itsum(101, 500);

SQL> select \* from ititems;

ITEMID ACTUALPRICE		ORDID	PRODID
101	2500	500	201
102	3000	1600	202
103	4000	600	202

#### PROCEDURE FOR 'IN' PARAMETER – CREATION, EXECUTION

SQL> set serveroutput on;

SQL> create procedure yyy (a IN number) is price number;

```
2 begin
```

3 select actualprice into price from ititems where itemid=a;

4 dbms output.put line('Actual price is ' || price);

5 if price is null then

6 dbms output.put line('price is null');

7 end if;

8 end;

9 /

Procedure created.

SQL > exec yyy(103);

Actual price is 4000

PL/SQL procedure successfully completed.

# PROCEDURE FOR 'OUT' PARAMETER - CREATION, EXECUTION

SQL> set serveroutput on;

SQL> create procedure zzz (a in number, b out number) is identity number;

```
2 begin
 3 select ordid into identity from ititems where itemid=a;
 4 if identity<1000 then
 5 b = 100;
 6 end if;
 7 end;
 8 /
Procedure created.
SQL> declare
2 a number;
3 b number;
4 begin
5 zzz(101,b);
6 dbms output.put line('The value of b is '|| b);
7 end;
8 /
```

## PROCEDURE FOR 'INOUT' PARAMETER – CREATION, EXECUTION

SQL> create procedure itit ( a in out number) is

```
2 begin
 3 a := a+1;
 4 end;
 5 /
 Procedure created.
SQL> declare
 2 a number:=7;
 3 begin
 4 itit(a);
 5 dbms_output.put_line('The updated value is '||a);
 7 /
The updated value is 8
PL/SQL procedure successfully completed.
CREATE THE TABLE 'ITTRAIN' TO BE USED FOR FUNCTIONS
SQL>create table ittrain (tno number(10), tfare number(10));
Table created.
SQL>insert into ittrain values (1001, 550);
1 row created.
SQL>insert into ittrain values (1002, 600);
1 row created.
SQL>select * from ittrain;
```

TNO	TFARE
1001	550
1002	600

#### PROGRAM FOR FUNCTION AND IT'S EXECUTION

```
SQL> create function aaa (trainnumber number) return number is 2 trainfunction ittrain.tfare % type; 3 begin 4 select tfare into trainfunction from ittrain where tno=trainnumber; 5 return(trainfunction); 6 end; 7 /
```

Function created.

SQL> set serveroutput on;

# Sarvesh S - 240701479 - DBMS RECORD

SQL> declare 2 total number;

```
3 begin
4 total:=aaa (1001);
5 dbms_output.put_line('Train fare is Rs. '||total);
6 end;
7 /
Train fare is Rs.550
PL/SQL procedure successfully completed.
```

# Program 1

# **FACTORIAL OF A NUMBER USING FUNCTION**

```
CREATE OR REPLACE FUNCTION factorial

(n IN NUMBER) RETURN NUMBER IS

result NUMBER := 1;

BEGIN

IF n < 0 THEN

RETURN NULL;

END IF;

FOR i IN 1..n LOOP

result := result * i;

END LOOP;

RETURN result;

END;

Function FACTORIAL compiled
